

Abraham (Avi) Naim, Ph.D. Cantab

Algebra & Calculus and Probability & Statistics

Mathematics has played a central part in my entire life. I studied both mathematics and physics, because they are deeply connected: physics tries to make sense of the world and mathematics is the language of physics. I worked in different places and had various roles, but mathematics and mathematical thinking were always at the heart of my work.

I currently teach mathematics and physics in a sixth form college. It is a challenging job at times but always rewarding when I can pass my knowledge on to my students and see them develop their individual abilities.

In my spare time I like to do sport, read and listen to music. I am a keen gardener as well.
